

Price Options – Baltimore County Public Schools

Prices effective July 31, 2011

The Kurzweil 3000 software is sold as individual licenses. Each license may be installed on one computer. As many users as desired can use the license on that computer. Floating licenses are available as well, installed for concurrent use on any computer on your local area network up to the amount of licenses owned. Call for info on Floating licenses.

The Kurzweil 3000 software comes in two versions, Scan/Read and Read Only. The Scan/Read software contains powerful OCR code that scans texts and puts the image on the monitor in a picture format and then reads, highlights, etc. The Read Only performs all the functions of the Scan/Read but does not have the OCR code. Every school should have at least one Scan/Read.

You will also receive Classic Literature CD's, which have hundreds of electronic texts ready for reading; the professionally authored *Tutorial Guide* which contains specific strategies and exercises in using the Kurzweil 3000; the foreign language/ESOL module; and membership to our electronic booksharing. Our services include free computer training for teachers at our Bethesda office and 10% discounts for parents whose school has the Kurzweil software.

When ordering, please designate if you want Windows or Mac
